/clone libt strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched with a NotI-oligo(dT)
grimer. Five prime end enriched with Not I and ECOR V
sites of the pCMVSPORT 6 vector. Library was normalized.

XhoI; cDNA made by oligo-dT priming. Directionally cloned direo EcoRI/XhoI sites using the following 5' adaptor: GGCACGAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies). Note: this is a NIH MGC Library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGAACGATGGCCGCAT-GACTTTGGTGGGCATCATCAGCT-GGGGCCTGGGCTGTGGACA 992

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    900
                                                                                                                                                              The present invention relates to a method of producing extracellularly accreed, active, correctly folded, recombinant tissue plasminogen activator (tPA), Kringle 2 serine protease molecule (K2S) or their variants in prokaryotic cells by expressing the protein-encoding DNA operably linked to DNA coding for signal peptide OmpA. The method is useful for producing recombinant DNA-derived tPA, K2S or their variants. Sequences of the invention are useful for manufacturing a medicament for treating stroke, cardiac infarction, acute myocardial infarction, pulmonary embolism, any artery occlusion such as intracranial artery occlusion (e.g., arteries supplying the brain), peripherally occluded arteries, coronary artery occlusion, deep vein thrombosis or related diseases associated with unwanted blood clotting. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                            8

of plasminogen replaces the native KI domain (AAR96221) of plasminogen replaces the native KI domain of tissue plasminogen activator (FPA) (AAR96220). It was obtd. by inserting a synthetic plasminogen KI domain DNA (AAT27586) into PPA cDNA and can be expressed in transformed Escherichia coli RRI cells (FERM P-9272). Novel plasminogen activators are produced that show increased clot lysing specificity or plasma half-life.

It was obtd. by mutagenesis of the sequence in vector Zem99-8000 (see also AAT27587). The novel protein can be expressed in Escherichia coli RRI/Zem99-8010 cells protein can be expressed in Escherichia coli RRI/Zem99-8010 cells increased clot lyaing specificity or plasma half-life. (Updated on 25-MAR-2003 to correct PF field.)
